

Medvolt Overview

A deep-tech company involved in AI-enabled Knowledge Discovery and Curation with proprietary databases & in-house insilico platform - MedGraph for accelerating Pharma R&D

10M+ Curated Data-points

15+ AI & Simulation models

Externally Validated

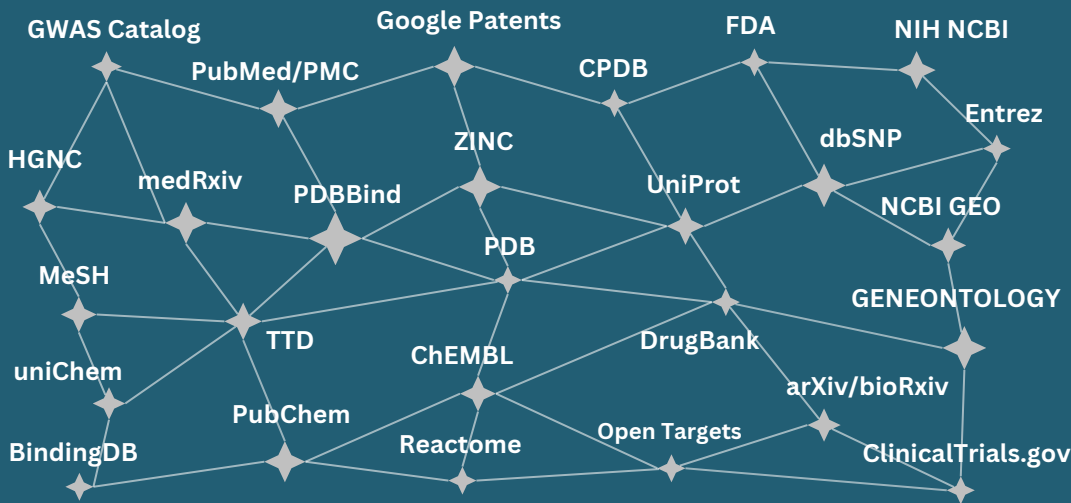

Actionable Insights

Accelerated Decisions

Better Outcomes

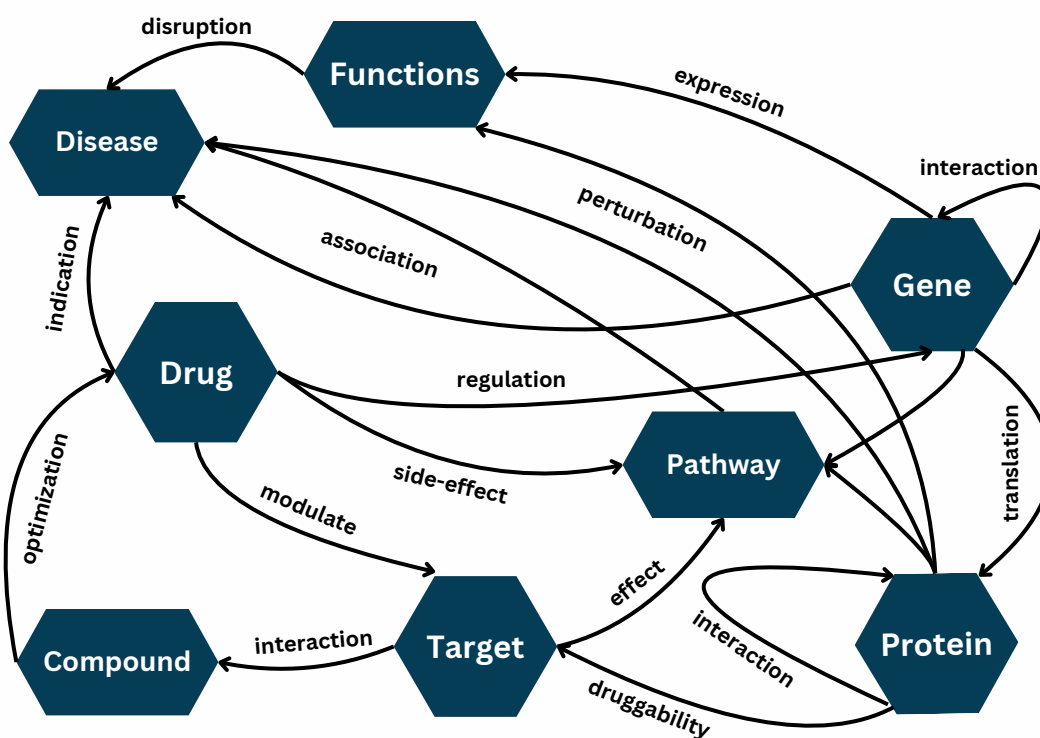

RAG-enabled Information Retrieval

MedGraph EDGE: Depth & Breadth for Pharma R&D

FEATURES

- Open + Proprietary datasources
- Structured & organized
- Graph & ontology enrichment
- Cutting-edge NLP/AI/ML
- Expert curation
- Contextual Causality
- Semantic Search
- FAIR friendly
- Updated regularly

Knowledge Graph with Ontology Enrichment

Data Aggregation

Preprocessing & Integration

AI-enabled Information Retrieval

Knowledge Graph

AI-enhanced Insights

Validation

Report Generation

Biomedical landscape: Multi-Omics Data

Dataset curation & annotation of 'omics data, for establishing robust relationships delineating disease mechanisms pointing to biomarkers for diagnostics and therapeutics applications, from hundreds of attributes resulting in thousands of variants mapped to multiple genes, proteins and phenotypes, is critical to understand etiology of diseases. This typically gets missed in conventional databases and analyses.

Extensive & expert data curation via **MedGraph EDGE** enhanced by AI & NLP helps clients access comprehensive annotated data insights from relevant databases coupled with domain expertise and an expert eye for curation, including but not limited to:

- SNPs, CNVs, InDels, translocations
- Cellular level data, epidemiological & molecular data from in vivo & in vitro experiments
- Gene regulation
- Post-translational protein modifications
- Cell behavior such as apoptosis, growth, motility and adhesion
- Protein-protein interactions
- Protein complex formation
- Cis/trans interacting domains

Data extraction & mining (NLP & AI)

Data cleaning & wrangling (NLP)

Annotataed Databases (AI)

Data Visualization and analytics (KG)

Biomedical landscape: AI for Better Data

NOVEL RESEARCH USECASES WITH BETTER DATA

Consumer Genomics/Ancestry

With millions of genotyped customers looking for analysis of their genomic data directly, fast & accurate curation is a MUST

Microbiome

Curation of human gut microbiome and cross-datasets (serological markers, food consumption data etc) for clinical markers

Decentralised Clinical Trials

DCT will be centre-stage with more improved data from wearables and biosensors curated accurately with speed and precision

Consumer Health

Individual health & nutrition support with data curated from sequencing coupled with ethnicity, age, education, biochemical parameters and more

CUTTING-EDGE AI FOR BETTER DATA AT SCALE

NER and Relationship Extraction

Algorithm to identify relevant entities in unstructured text

Ambiguity Resolution

Normalized with reference to ontologies

Semantic Contextual Enrichment

AI models with LLMs to enrich relationships with contextual data

Causality Confidence Generation

Identify causal relationships with directionality
